Characteristics Part. S0174R

It differs from Part. S0174 in the use of a special material and a stiffening bush (spacer).

The increased elasticity of the material permits, once the bolts are untightened, the clamp to slide easily over the rod. Especially suitable for applications with frequent adjustment.

The spacers A (nickel plated brass) prevent breakage of clamp when bolts are tightened higher than max. recommended values. The resulting loads are absorbed by the spacers and not the body.

Assembly of Part. S0174 - S0174R with ratchet handle

Can be applied with the ratchet handle Part. S0303 (code 60922), instead of the standard hardware.
